End-of-Life Notification
BlueCat Networks' Adonis Management Console (AMC)

BlueCat is announcing the End-of-Life (EOL) schedule for the Adonis Management Console (AMC). Customers with valid support contracts for versions of BlueCat DNS/DHCP Server (formerly Adonis) up to 6.7.1 may choose to continue to use AMC after its end of life and will receive support until the End-of-Service (EOS) milestone for their version is reached. However, BlueCat will only be providing patches to AMC until the stated End-of-Life date.

The AMC is replaced by the BlueCat Address Manager (formerly Proteus) software solution. BlueCat recommends customers upgrade to BlueCat Address Manager for configuration and management of their DNS, DHCP, and IP address space(s). This will enable AMC customers to leverage BlueCat Address Manager's always-on global visibility and control, while also experiencing the benefits it provides for virtualization, IPAM automation and mobile security.

Please note that starting with our upcoming BlueCat DNS/DHCP Server v7.0 release, the AMC will no longer be included or compatible with the BlueCat DNS/DHCP Server product.

Version Release and End-of-Life Milestones

Suggested Destination Release

- BlueCat Address Manager (formerly Proteus) v4.0

End-of-Life Milestone Timetable

Version Release Date (v6.7.1)	Apr 3rd, 2012
