BlueCat Training Services On-site Instructor-led Training

ON-SITE TRAINING BENEFITS

- Real-world experience
- Customized content
- Continuous knowledge transfer

BlueCat Training Services empowers your staff with knowledge transfer that keeps pace with the design and deployment of your BlueCat solution. BlueCat experts design distinct learning paths to address the comprehensive needs of your IT organization. Our training offerings equip your staff with the skills needed to optimize your IPAM, DNS or DHCP solution and realize its full potential.

EMPOWER YOUR STAFF WITH ON-SITE TRAINING

BlueCat Training Services' on-site instructor-led courses help students quickly learn best practices for administering your environment. Certified instructors walk students step by step through the administrative tasks required for your unique configuration. Instructors will even tailor course content to meet your students' learning needs.

This practical, hands-on instruction allows students to apply newly acquired knowledge and skills as soon as they return to the job.

On-site courses are a particularly good option if you have a large group of employees in one location who need training. Each course can accommodate up to 10 students. The only requirements are that you provide a classroom with a projector, network connectivity and enough desktop or laptop computers for each attendee.

TRAINING OFFERINGS

BlueCat Training Services offers the following courses.

IPAM Essentials

IPAM Essentials gives networking professionals a functional understanding of the Proteus system as it is commonly used. Focusing on the daily administration of IPAM, DNS and DHCP, this 8-hour course is appropriate for level-one technicians, and is a pre-requisite for the IPAM Administration course. The topics covered include:

- Managing IPv4 and IPv6 address spaces
- Using Proteus IPAM tools to model and maintain the IPv4 space
- Managing DNS resource records, zones, views and options
- Managing DHCP classes, ranges and options

BlueCat Training Services

On-site Instructor-led Training

IPAM Administration

The IPAM Administration course examines the more advanced features and functions of the Proteus system, as well as advanced system administration and management activities. This 15-hour course is appropriate for system administrators and IPAM owners, and covers the following topics:

- Working with network templates
- Configuring and managing DHCP failover and crossover high availability (XHA)
- Integrating workflow into a multi-level user environment
- Using the IP reconciliation feature to identify unknown resources and to clean mismatched or incorrect data
- Managing users, groups and access rights
- Managing Windows DNS and DHCP services using the Proteus Management Agent for Windows

A PRACTICAL APPROACH FOR LONG-TERM SUCCESS

Real-world Experience

Nothing prepares your staff like real-world experience. BlueCat on-site courses allow students to work in a testing environment that replicates your infrastructure. Working alongside certified instructors who draw upon their own practical experience, students learn best practices for administering your unique deployment and troubleshooting unexpected challenges. In addition, since training takes place on site, students can immediately apply what they learn in class into their daily work routines.

Customized Content

Small classes and one-on-one interaction allow instructors to customize course content based on students' learning needs. In an on-site setting, instructors get real-time feedback on students' comprehension of the material. If, for example, students struggle to understand certain administration tasks, instructors can adjust the focus on the fly to clear up the confusion, maximizing the course's effectiveness.

Continuous Knowledge Transfer

On-site courses supplement the knowledge transfer that staff received during the solution definition, design and deployment phases. Instructors from BlueCat Training Services work seamlessly with our Professional Services team to continue your staff's education in a hands-on, class-based setting.

GET STARTED TODAY

BlueCat Training Services' on-site courses provide real-world, customized training that continues your staff's development. By investing in on-site training, you equip your staff with the skills to not only maintain your infrastructure, but also leverage it to foster business growth.
