BlueCat Training Services Virtual Instructor-led Training

VIRTUAL TRAINING BENEFITS

- Flexible schedule
- Collaborative learning environment
- Cost savings

BlueCat Training Services empowers your staff with knowledge transfer that keeps pace with the design and deployment of your BlueCat solution. BlueCat experts design distinct learning paths to address the comprehensive needs of your IT organization. Our offerings equip your staff with the skills needed to optimize your IPAM, DNS or DHCP solution and realize its full potential.

REAL-WORLD EXPERIENCE IN A VIRTUAL ENVIRONMENT

BlueCat offers two virtual instructor-led courses that cover how to effectively install and administer BlueCat technologies. Each course is scheduled on a regular basis to accommodate attendees worldwide. Your IT staff can register for any scheduled class.

Virtual instructor-led courses are ideally suited for customers with fewer than six students. Each student is assigned a dedicated virtual lab environment with a full complement of the systems required to simulate a production environment.

The lab environment is accessible from any Internet-connected client with a standards-compliant Web browser. Students retain 24-hour access to the lab environment for the duration of the course, allowing them to spend time out of class reviewing course content.

TRAINING OFFERINGS

BlueCat Training Services offers the following courses

IPAM Essentials

IPAM Essentials gives networking professionals a functional understanding of the Proteus system as it is commonly used. Focusing on the daily administration of IPAM, DNS and DHCP, this 8-hour course is appropriate for level-one technicians, and is a pre-requisite for the IPAM Administration course. The topics covered include:

- Managing IPv4 and IPv6 address spaces
- Using Proteus IPAM tools to model and maintain the IPv4 space
- Managing DNS resource records, zones, views and options
- Managing DHCP classes, ranges and options

BlueCat Training Services Virtual Instructor-led Training

IPAM Administration

The IPAM Administration course examines the more advanced features and functions of the Proteus system, as well as advanced system administration and management activities. This 15-hour course is appropriate for system administrators and IPAM owners, and covers the following topics:

- Working with network templates
- Configuring and managing DHCP failover and crossover high availability (XHA)
- Integrating workflow into a multi-level user environment
- Using the IP reconciliation feature to identify unknown resources and to clean mismatched or incorrect data
- Managing users, groups and access rights
- Managing Windows DNS and DHCP services using the Proteus Management Agent for Windows

A UNIQUE APPROACH WITH UNIQUE BENEFITS

BlueCat Training Services' virtual instructor-led training delivers several unique benefits over multiple-day, in-person training options—including scheduling flexibility, a collaborative learning environment and cost savings.

Flexible Schedule

Virtual courses provide a convenient and flexible alternative to attending a multiple-day, in-person course. For added flexibility, courses are broken into half-day sessions, allowing your staff to receive training without impacting their daily workload.

This means your staff can continue handling their day-to-day responsibilities without diminishing the learning experience.

Collaborative Learning Environment

BlueCat virtual courses leverage the latest online training tools to give students a real-world, hands-on experience. Each virtual course uses voice and video conferencing tools to link students with instructors and to provide each student with a dedicated lab environment for the duration of the class, and even outside of scheduled class hours so they can continue learning at their own pace.

Cost Savings

Besides providing flexibility and an experiential learning environment, BlueCat virtual training delivers an important benefit for all organizations: cost savings. Giving students a virtual training option helps you eliminate the travel costs associated with sending administrators to in-person training. Additionally, since administrators can attend classes from their own offices, they can continue their day-to-day administrative work while expanding their skill sets—eliminating costs associated with lost productivity.

GET STARTED TODAY

BlueCat Training Services' virtual instructor-led training offers a flexible, experiential and cost-effective learning environment that equips your staff to manage your infrastructure long term.
