BLUECAT VIRTUAL LAB

A SAFE AND DESTRUCTIVE ENVIRONMENT

Powered by
PRIVATE CLOUD

BlueCat Virtual Lab is a testing environment that is powered by BlueCat Private Cloud™. By leveraging this solution, customers have access to a safe and destructive platform to test mission critical services and initiatives before they are deployed live within their enterprise. BlueCat Virtual Lab provides customers with an always-on service assurance with a robust and evolving set of capabilities that offer superior utility, reliability and flexibility.

Powerful Capabilities

From feature evaluation to full network modelling to employee training, BlueCat Virtual Lab offers a powerful and controlled environment to safely evaluate and experiment risk-free.

Accessibility and Agility

Reliable and always available, BlueCat Virtual Lab removes location barriers and brings simplicity to long-distance collaboration between teams. Gain the flexibility to easily adjust the scope and configuration of any deployment.

Convenience and Lower Total Cost of Ownership

Experience a simple, predictable, and controllable cost model. There are no upgrade, replacement or maintenance costs with BlueCat Virtual Lab.

BlueCat Virtual Lab Capabilities

BlueCat Virtual Lab provides customers with rich capabilities for environment modelling.

Deployment of BlueCat Solutions

Build versions of complex, automated processes around your BlueCat environment in a virtual workspace. Develop, design, and test in a safe environment before deploying to production.

Training

Put theory into practice. BlueCat Virtual Lab compliments training courses with no fear of causing disruption in live production.

Architecture modification and Experimentation

Experiment with changes in a safe environment that matches your production architecture. Use VM images including BlueCat or 3rd party, create a simulated development environment.

Software Upgrade

Hesitant about upgrading your software? Don't be. BlueCat Virtual Lab, provides a working version of your production environment to test upgrades safely before going live. Confidently implement, verify and establish a baseline and ensure your upgrade goes smoothly.
