MAKE DNS YOUR FIRST LINE OF DEFENSE.

BlueCat DNS Edge™ adds a much-needed layer of visibility, control and detection for corporate networks under siege from an explosion of malware attacks that exploit DNS. Industry research finds 91% of malware uses the DNS protocol for command and control (C2), data exfiltration, and to deliver malicious payloads onto your network, undetected.

BlueCat DNS Edge gives cybersecurity and network teams shared visibility and control over internal and external DNS traffic. Through a single platform, mitigate and eliminate the ways attackers can exploit DNS, detect and block cyberattacks, and investigate incidents uncovering lateral movement and identifying patient zero. With Edge, teams can simplify DNS operations, tighten security, and improve network performance in ways traditional DNS solutions alone cannot achieve.

Deeper Visibility
Log every internal and external DNS query and response from every client type, providing investigative context — with no agent required.

Better Control
Apply policies to control access for every client, block threats and protect sensitive data and critical systems. Control the DNS resolution path for network optimization.

Greater Detection
Leverage smart analytics of every DNS query from every client to identify malicious behavior and evasive techniques using DNS.

Learn more at bluecatnetworks.com/cybersecurity
Unlike network firewalls, DNS firewalls, web proxies and other tools, Edge sits at the first DNS hop. This allows Edge to detect, mitigate and eliminate malware exploiting DNS by collecting both internal and external DNS data and applying policy control close to the originating clients and between internal apps and services.

Agentless Deployment
BlueCat DNS Edge provides visibility, protection, and control to any device that leverages DNS without the need to deploy and manage an agent on those devices.

Zero-Touch Deployment
Without changes to existing DNS infrastructure, BlueCat DNS Edge collects DNS queries and responses through virtual service points residing at the first hop. Deploy unlimited service points at no cost.

Operational Simplicity
Ingest 3rd-party threat intelligence to block known-bad domains. Integrate with leading SIEMs or Splunk to correlate DNS data with other security data.

Scalability & Availability
Built on proven, enterprise cloud infrastructure that dynamically scales to meet any collection, storage, and processing requirement without interruption and allows for local high availability as well as geographic failover.

About BlueCat
BlueCat is the Enterprise DNS Company™. The largest global enterprises trust BlueCat to provide the foundation for digital transformation strategies such as cloud migration, virtualization and cybersecurity. Our Enterprise DNS platform improves control and compliance across entire networks, enabling organizations to centralize and automate DNS services for security and operational efficiency.
